Nimbus API operations

Owner: Developer Platform. Access scope: workshop-public.

Version: 2026.2. Effective date: 2026-09-01. Supersedes previous-policy.html and ../source-02/api-current.html for API operation limits and retries. The webhook delivery guide in source-02 remains applicable.

Applicability

Nimbus order API production and sandbox keys. Limits are per API key and operation, not an account-wide pool.

Limits and eligibility

Operation	Standard key / minute	Partner key / minute
Read orders	120	300
Create order	30	90
Export status	20	60

Rule and exception

Limits apply separately per API key and operation. Exception: sandbox keys may make only 10 requests per minute for any operation, regardless of plan. Excess traffic returns HTTP 429.

Calculation or timing

Backoff delay in seconds = min(2^attempt, 32), with attempt starting at 0. If Retry-After is present, wait at least its stated duration instead.

Idempotency

Retrying a create-order request requires the original Idempotency-Key. A repeated key with a different request body returns HTTP 409. Client timeout alone does not prove that an order failed.
