Nimbus information classification and retention

Version: 2026.2. Effective date: 2026-09-01. Owner: Information Governance.

Access scope: workshop-public. Supersedes previous-policy.md.

Applicability

Nimbus business records in approved systems; a valid legal hold overrides routine deletion.

Classification

Class	Examples	Sharing boundary
Public	Approved website copy	Public after publication approval
Internal	Team procedures	Nimbus workforce with business need
Confidential	Customer contracts	Named authorized roles
Restricted	Credentials, identity evidence	Explicitly approved custodians

Retention schedule

Retain routine application logs for 30 calendar days and security audit logs for 365 calendar days from creation. Retain supplier invoices for seven years after the invoice date. These are synthetic Nimbus operating rules, not a statement of statutory requirements.

Holds and disposal

Legal identifies the record scope and release authority for a hold. Owners suspend deletion for matching records until Legal releases the hold in writing. When routine retention expires and no hold applies, use the system's approved deletion workflow and record completion.

Classification versus access

Classification describes handling needs; it does not itself grant access. All files in this training collection are workshop-public synthetic inputs, even when their fictional subject is confidential information. Customer workspace deletion has separate lifecycle rules in source-34. This schedule does not specify every record type; unresolved types go to Information Governance.

Related document: operational-record.md supplements this source; read its record type and effective period before applying it.

Original synthetic workshop content. Nimbus Labs and all people, services, incidents, and rules described here are fictional. This is not legal, medical, or security advice.
